

A System of Chemistry, Vol. 3 of 5 (Classic Reprint)

Excerpt from A System of Chemistry, Vol. 3 of 5 These salts are formed by saturating the alkaline and earthy bases with sulphurous acid. The easiest process is that which was followed by Berthollet, and afterwards by Vauquelin and Fourcroy. The proper mixture of sulphuric acid and mercury for obtaining sulphurous acid is to be put into a glass vessel, from which there passes a tube into a small bottle containing a little water. From this bottle there passes another tube into one of Woulfes bottles, which contains the alkaline or earthy base designed to be combined with sulphurous acid, either dissolved or suspended in water. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
