

Nano ZnO antimicrobial additives to epoxy and Acrylic paints

Environment infectious microorganisms are numerous. Continuous research of new additives to restrain and to inhibit their harmful effect to humans must always be attended to. The current work is a serious attempt to restrain familiar strains of serious microorganisms within epoxy and emulsion acrylic paints using more environmental safer, effective and long action additives. Coating and in-can effectiveness were attended in addition to the identification of the additives chemical structure, thermal stability and microbiological aspects relevance and compatibility.
