

American Chemical Journal, 1900, Vol. 24 (Classic Reprint)

Excerpt from American Chemical Journal, 1900, Vol. 24 In a former paper it was shown that nitromalonic aldehyde readily entered into reaction with acetone in alkaline solution, and that the product formed was nitrophenol. Certain results which had already been obtained by Messrs. Soch and Oenslager were also mentioned, which showed that the reaction could easily be extended to other ketones and to ketone-acids. Although their investigation was at that time essentially completed, a few experimental details still needed revision, and as both of these gentlemen had already left Cambridge, the publication of their results has necessarily been delayed. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
