

# Biology of the Antarctic Seas XIV, Volume 39 (Antarctic Research Series)

Published by the American Geophysical Union as part of the Antarctic Research Series, Volume 39. Fifteen species of sea anemones from Antarctic and sub-Antarctic seas are discussed. These include one member of Order Ptychodactiaria and 14 (in nine families) of Order Actiniaria. Three of the actinarians are new species, one belonging as well to a new genus: *Bolocera paucicornis* n. sp., *Bathypheilia australis* n. sp., and *Eltaninactis infundibulum* n. gen., n. sp. Of the 12 previously described species, only *Galatheanthemum profundale* and *Actinauge verrillii* had not been recorded from south polar seas before. The other known species of *Bathypheilia* is boreal.
