

## Carbonate Chemistry of Aquatic Systems: High Salinity Waters v. 2

The object of the book is to develop a model for the carbonate system that can be applied to a wide variety of problems involving this system in the aqueous-gaseous-solid phases. This volume deals in high salinity for ionic strengths up to about 5. Chapters are Non-Associated Binary Electrolytes, Non-Associated Mixed Systems, pH and Weak Acid-Base Systems, and Phase Equilibria,
