

## Monthly notices of the Royal Astronomical Society Volume N. 50

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt: ...16 with an address from Admiral Mouchez, after which MM. Christie and Duner were appointed vice-presidents, and MM. Bakhuyzen and Trepied secretaries. A provisional programme of questions for discussion was laid before the committee, and the important subjects of the distribution of the work among the different observatories and the selection of test-objects were submitted to a special committee consisting of MM. Beuf, Christie, Cruels, and Loewy. The results of the seven sances which were held are contained in a series of twenty-eight resolutions, of which we may mention the more important. The zones assigned to the several participating observatories are as follows:--North. Twelve test-objects were selected, all of which are situated near the equator, at intervals of about two hours of right ascension. In addition to these the Pleiades, Prcesepe, and a group in Gygnus were selected for the use of the more northern observatories. It was decided that the field of the telescope available for measurement should be 2 square; that the photographic plates employed (which are to be of plate glass) shall be 160 mm. (6? inches) square and the reseaux 130 mm. (5 inches) square, with the lines 5 mm. apart. Much consideration was given to the important question of fixing the time of exposure for the second series of plates, so as to ensure that they shall contain stars to magnitude 11 o, and it was eventually resolved to determine the time necessary to photograph a star of magnitude 0/0 of Argelanders scale, and then multiplying that by 625 will give the exposure for magnitude iro. Another important resolution was passed respecting the catalogue plates to the nth

magnitude, viz. that there shall be two exposures on each plate: the first to give stars to m...
