

Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances 1999

This publication is divided into two parts: the first part describes the framework for precursor control and action taken by the Governments; the second part collects analysis of data on illicit traffic and seizure of precursors and trends in illicit manufacture of drugs. The collected data enables national and international bodies to establish the necessary working mechanisms and standard operating procedures, to secure timely exchange of information to prevent diversion and to identify suspicious transactions.
